About Your New Cable Modem

The Touchstone CM450 Cable Modem is a DOCSIS 2.0 (A-TDMA and S-CDMA) ready cable modem with the following features:

- Speed: much faster than dialup or ISDN service
- Convenience: supports USB 1.1 and Ethernet; both can be used simultaneously
- Security: a **Standby** button lets you isolate connected computer(s) from the Internet without shutting off the Cable Modem
- Compatibility: supports tiered data services (if offered by your cable company)

What's in the Box?

Make sure you have the following items before proceeding. Call your cable company for assistance if anything is missing.

Items You Need

If you are installing the Cable Modem yourself, make sure you have the following items on hand before continuing:

- **Cable modem package**: see What's in the Box? for a list of items in the package.
- **Coaxial cable (coax)**: as shown in the picture to the left, this is a thin cable with a connector on each end. It is the same kind of wire used to connect your television for cable TV. You can buy coax from any electronics retailer and many discount stores; make sure it has connectors on both ends. (There are two types of connectors, slip-on and screw-on; the screw-on connectors are best for use with your Cable Modem.) The coax should be long enough to reach from your Cable Modem to the nearest cable outlet.
- **Splitter (optional)**: provides an extra cable connection by splitting a single outlet into two. You may need a splitter if you have a TV already connected to the cable outlet that you want to use. You can buy a splitter from any electronics retailer and most discount stores; you may also need a short piece of coaxial cable (with connectors); use it to connect the splitter to the cable outlet and then connect the Cable Modem and TV to the splitter.
- Note:
- A splitter effectively cuts the signal in half and sends each half to its two outputs. Using several splitters in a line may slow down or stop Internet communications, or cause snowy TV pictures.
 - **Information packet**: your cable company should furnish you with a packet containing information about your service and how to set it up. Read this information carefully and contact your cable company if you have any questions.

What About Security?

Having a high-speed, always-on connection to the Internet requires a certain amount of responsibility to other Internet users—including the need to maintain a reasonably secure system. While no system is 100% secure, you can use the following tips to enhance your system's security:

- Keep your operating system updated with the latest security patches. Run the system update utility at least weekly.
- Keep your email program updated with the latest security patches. In addition, avoid opening email containing attachments, or opening files sent through chat rooms, whenever possible.
- Install a virus checker and keep it updated.
- Use the **Standby** button on your Cable Modem to disconnect your PC from the cable system when you are not using the Internet.
- Avoid providing web or file-sharing services over your Cable Modem. Besides certain vulnerability problems, most cable companies prohibit running servers on consumer-level accounts and may suspend your account for violating your terms of service.
- Use the cable company's mail servers for sending email.
- Avoid using <u>proxy</u> software unless you are certain that it is not open for abuse by other Internet users (some are shipped open by default). Criminals can take advantage of open proxies to hide their identity when breaking into other computers or sending spam. If you have an open proxy, your cable company may suspend your account to protect the rest of the network.
- If you connect your Cable Modem to a wireless LAN, make sure you enable security and encryption on the wireless hub (for the same reason that you should run only secured proxies). Consult the documentation and technical support of the wireless equipment provider for help.

Installing and Connecting Your Cable Modem

Before you start, make sure that:

- You have contacted your cable company and verified that they provide data service using standard DOCSIS technology.
- Make sure you have all the <u>Items You Need</u>.
- Cable and power outlets are available near the PC. If a cable outlet is not conveniently located, your cable company can install a new one.

Getting Service

Before trying to use your new Cable Modem, contact your local cable company to establish an Internet account. When you call, have the following information ready:

- the Cable Modem serial number and MAC address (printed on a sticker on the bottom of the Cable Modem)
- the model number of the Cable Modem

Save this information for future use. In addition, you should ask your cable company the following questions:

- Do you have any special system requirements or files that I need to down-load after I am connected?
- When can I start using my Cable Modem?
- Do I need a user ID or password to access the Internet or my e-mail?

Installing USB Drivers on Your PC

When you plug the Cable Modem into the PC's USB port, Windows automatically detects the hardware and begins installing the USB drivers.

Requirements

Make sure you have the following before attempting to install the USB drivers:

- PC with:
 - CD-ROM drive
 - at least one free USB port
 - one of: Windows 98SE, Windows 2000, Windows ME, or Windows XP (Windows 95 and Windows NT are **not** supported)
 - ARRIS USB Driver CD
- USB <u>A/B Cable</u> of appropriate length (a cable is included in your Cable Modem package)

Installation Instructions

Indicator Lights

The Touchstone[™] Cable Modem has five lights to assist in troubleshooting.

Patterns: Normal Operation

The following table shows light patterns during normal operation. An \mathbf{x} indicates that the particular light is not important for determining the state.

		Name			Description
Power	Online	Cable	USB	Ethernet	
Off	Off	Off	Off	Off	No power to Cable Modem
On	Blink	x	x	x	Standby switch active (the computers are disconnected from the Internet)
On	On	x	x	x	Standby switch inactive
On	х	On	х	x	No data to/from the cable interface
On	х	Blink	х	x	Data activity on the cable interface
On	x	x	Off	x	USB link disconnected (i.e. PC is disconnected or powered off)
On	х	x	On	x	USB link connected, no traffic
On	x	x	Blink	x	USB data activity with PC
On	x	x	x	Off	Ethernet link disconnected (i.e. equip- ment is disconnected or powered off)
On	x	x	x	On	Ethernet link connected, no traffic
On	x	x	x	Blink	Ethernet data activity with connected equipment

See <u>Using the Standby Button</u> for more information about the standby mode.

LED Indicators: Startup Sequence

The following table shows the Cable Telephony Modem light patterns during each phase of the startup sequence. An \mathbf{x} indicates that the light is not important for determining the state.

		Name			Description
Power	Online	Cable	USB	Ethernet	
Off	Off	Off	Off	Off	No power to Cable Modem
On	Off	Off	Off	Off	Power-on Self Test
Blink	Off	Off	Off	Off	Self Test failed
Blink	Off	Blink	x	x	Scanning for downstream RF carrier
Blink	Off	On	x	x	Initial ranging in progress
Blink	Blink	On	x	x	Obtaining data IP address (DHCP)
Blink	On	On	x	x	Downloading data configuration (TFTP)
On	On/Blink	On/Blink	x	x	Data registration complete

	Troubleshooting USB Problems							
			Follow these steps if	the PC does not	auto-detect the Cable Mo	dem using a USB		

Before you start, make sure that:

- You have properly installed and configured the Cable Modem as shown in Installing and Connecting Your Cable Modem.
- You have installed the USB drivers as shown in <u>Installing USB Drivers on</u> Your PC.
- The cable company has set up your account. Call your cable company if you're not sure.

Instructions

connection.

- 1 Be sure that your PC is running either Windows 98SE, Windows 2000, Windows ME, or Windows XP (Windows 95 and Windows NT are **not** supported).
- 2 Be sure the Cable Modem has power. The **Power** light should be on.
- **3** Push the **Reset** button on the back panel of the Cable Modem, using a pen tip or other sharp non-metallic object.
- **4** Disconnect the USB cable from the PC and reconnect it.
- 5 Restart the PC.
- **6** Do the following to uninstall and the reinstall your USB drivers:
 - **a.** Disconnect the USB cable to the Cable Modem.
 - **b.** Insert the Cable Modem CD-ROM into you computer.
 - **c.** Start the uninstall utility on your CD-ROM. Follow the on-screen instructions carefully.
 - **d.** Reconnect the USB cable.
 - e. Re-install the USB driver as shown in <u>Installing USB Drivers on Your PC</u>.
- **7** Replace the USB cable.
- **8** Call your cable company for help.

Glossary

The following is a list of common cable and networking terms.

Terms and Abbreviations

A/B Cable

A USB cable that has a narrow rectangular connector on one end (A) and a notched square connector (B) on the other end.

Category 5 (Cat5)

A high-quality type of cable, used for Fast Ethernet (100BaseT) connections. When purchasing Ethernet cables, always look for Category 5 cable.

Coaxial cable (coax)

A thin wire, used to connect your television and Cable Modem to the cable TV system. You can buy coax from any electronics retailer and many discount stores.

Cross-over

An Ethernet cable used to connect two hubs (or a hub and a cable modem) together. Also, some Ethernet hubs may have built-in cross-over on one or more ports (which eliminates the need for a cross-over cable).

DHCP

Dynamic Host Configuration Protocol. An IP protocol used to provide an IP address and location of services (such as DNS and TFTP) needed by a device connecting to the network. DHCP allows the cable company to configure your computer's networking software for you.

DNS

Domain Name Service (Server). An IP service that associates a domain name (such as www.example.com) with an IP address.

Downstream

In an HFC network, the direction from the head-end to the subscriber. Some older cable documentation may refer to this as the forward path.
