About Your Wireless Gateway

The XFINITY™ Wireless Gateway is the next-generation cable modem and Voice-Over-IP (VoIP) adapter, integrated with home gateway features. It combines a two-line Embedded Media Terminal Adapter with an integrated WiFi router and four wired Gigabit Ethernet RJ45 ports for multiple device connection. Your Wireless Gateway has been designed to meet DOCSIS® 3.0 specifications.

Here's what you get

...when you subscribe to both XFINITY Voice and Internet services:

- **WiFi Technology** — WiFi uses radio frequency to connect computers and other devices to a network without wires. Your Wireless Gateway can connect to b, g and n clients simultaneously.
- **Fast Download Speed** — Your Wireless Gateway is DOCSIS 3.0 compliant with speeds up to eight times faster than DOCSIS 2.0 cable modems.
- **Easy Connectivity** — Connect any WPS-compatible computer or device with just one button.
- **Security** — Because WiFi networks send information over radio waves, signals from your wireless network can be intercepted by unauthorized users. Use the simple Home Network Wizard to securely set up your WiFi broadband connection for WiFi enabled devices.
- **Convenience** — Simultaneously use four Ethernet ports for wired devices and 802.11b/g/n connectivity for wireless devices. Choice between wireless LAN (WLAN) or wired Ethernet LAN connections.
- **Flexibility** — the ability to support two lines of telephone service, as well as high speed data; the ability to use your existing router with your Wireless Gateway.
- **Telephony Services** — Complies with PacketCable™ 1.5
- **Protection** — Lithium Ion battery back-up (included with XFINITY Voice subscription)

Note: If you haven't already done so, please activate both XFINITY Voice and Internet services if you subscribe to both, or just XFINITY Internet services if you subscribe only to high-speed data services. Refer to the user guide you received with each of these services for activation instructions and information about XFINITY Voice and Internet features.

Overview

FRONT PANEL

The front panel, featuring a set of LED indicators, shows the status of your Wireless Gateway. Being familiar with these indicators can help with troubleshooting.

Fig. 1

The front of your Wireless Gateway (Fig. 1) has the following LED indicators:

- A WPS button:** WPS (WiFi Protected Setup) is active (Button with light ring is located on top panel)
- B Power:** AC power status
- C US/DS:** Upstream and downstream connectivity
- D Online:** Internet connectivity status
- E WiFi:** Status of the wireless LAN
- F Tel 1:** Status of telephone line 1
- G Tel 2:** Status of telephone line 2
- H Battery:** Battery status

LED	Table 1. Front Panel LED Indicators
Power	Blinking=power failure and during battery backup ON=power being supplied OFF=power is not being supplied
US/DS	Blinking=ranging is in progress ON=ranging is complete on 1 channel only OFF=scanning for DS channel
Online	Blinking=cable interface is acquiring IP address, Time of Day, Cable Modem configuration ON=device is online OFF=device is offline
WiFi	Blinking=transmitting data to the WiFi interface ON=WiFi is enabled OFF=WiFi is disabled
Tel 1	Blinking=Tel line 1 is in use ON=Tel 1 port is online OFF=Tel 1 port is offline
Tel2	Blinking=Tel line 2 is in use ON=Tel 2 port is online OFF=Tel 2 port is offline
Battery	Solid Glow=battery is charging Blinking=battery power is low; use AC power as soon as possible ON=operating on AC power, battery not charging OFF=(a) If Battery LED is off and Power LED is blinking, then device is in battery backup mode. (b) When Battery LED is off and Power LED is solid, no battery is installed or is not functioning properly.

REAR PANEL

The rear panel of your Wireless Gateway features a Reset button, as well as ports for attaching the supplied power adapter and connecting additional devices.

Fig. 1

The back of your Wireless Gateway (Fig. 1) has the following connectors and controls:

- A** **Reset button:** resets the Wireless Gateway (see details below)
- B** **USB host connector** [For Future Use]
- C** **Tel 1 connector** for analog phone line
- D** **Tel 2 connector** for analog phone line
- E** **Gigabit Ethernet (1 - 4) connectors** for use with a computer LAN port (Each port has two LED lights. See Table 1 below.)
- F** **Cable connector** for the coaxial cable
- G** **Power connector** for the power cord

LED	Table 1. Gigabit Ethernet Connectors LED Indicators
Green	Indicates Gigabit Ethernet in use
Orange	Indicates Fast Ethernet in use

Reset Button (Recessed to protect against accidental reset)

Pressing the Reset button for varying lengths of time performs two types of reset operations.

- **Normal Reset** – reboots the Wireless Gateway but retains current configuration settings.
Use a thin object, press the reset button for at least 2-5 seconds and release.
- **Factory Reset** – deletes all changes made to the original configuration settings and restores the Wireless Gateway to the factory configuration.
Use a thin object, press and hold the reset button for 15 seconds or more before releasing.

You can also reset your Wireless Gateway using the *Web Management Interface* at <http://10.0.0.1>.

CAUTION: If you select Restore Factory Settings, be certain you want to reset ALL settings (such as passwords, parental controls and firewall settings) before proceeding! All customized settings made to your Wireless Gateway will be lost. Also, a Factory Reboot will take your Wireless Gateway out of Bridge Mode if it had been previously enabled. Call 1-800-XFINITY to re-enable Bridge Mode.

TOP PANEL

The top panel of your Wireless Gateway features a **WPS** button (Fig. 1). WPS (or WiFi Protection Setup) enables you to securely set up a WiFi network without entering the Network Key/Password.

Fig. 1

BOTTOM PANEL

The bottom panel of your Wireless Gateway has a panel for the battery. View battery status by accessing the Battery menu from the Web Management Interface at <http://10.0.0.1>. The battery will provide backup for voice service in case of an AC Power outage, but is not intended to replace the AC power for an extended period.

To install a battery, use the following procedure.

1. Place the Wireless Gateway sideways on a table.
2. Remove the battery compartment door on the bottom panel and set it aside.
3. Insert the battery in the battery compartment with the corresponding polarity correctly in place.
4. Replace the battery compartment.

A battery is needed to enable voice service availability in the event of a power outage. A battery is included with your Wireless Gateway *only if you subscribe to XFINITY Voice*. If you did not receive a battery and you are an XFINITY Voice subscriber, please call 1-800-XFINITY.

CAUTION: Do not unplug the power cord of your Wireless Gateway for an extended period.

If left unplugged and the battery power supply is drained, you will not be able to make any phone calls, including 911 emergency calls.

BOTTOM LABEL

The label located on the underside of the Wireless Gateway displays important information you need to connect your computer.

Network Name	HOME - XXXX (where XXXX is the last 4 digits of the Cable Modem MAC)
Encryption	WPA-TKIP
Network Key	[Printed on the label]
WPS PIN	[Printed on the label]
URL	http://10.0.0.1

DEFAULT CONFIGURATIONS

Following are the factory default configurations for the Wireless Gateway:

WPS	Enabled
Gateway IP	http://10.0.0.1
Firewall Configuration	Low (No ports are blocked)
UPnP	Enabled
All other features are disabled by default. In order to enable and modify other features, use the Web Management Interface at http://10.0.0.1	

WiFi Connection

Learn how to create a WiFi connection from your computer to your Wireless Gateway for initial WiFi connectivity or after a Factory Reset.

If your computer is already connected to the Internet, go to Step 2.

1. CONNECTING TO THE INTERNET WIRELESSLY

- A. Lift the Wireless Gateway (Fig. 1). Look for the white label located on the underside of the device (Fig. 2). Note the Network Name.

Network name: HOME-5A58
 Encryption: WPA-TKIP
 Network Key: H2A237E0B72D40B5
 WPS PIN: 39552884
 URL: http://10.0.0.1
 S/W Ver: 2.1.2.6
 HW Ver: 4.0

Fig. 2

Fig. 1

- B. On your computer, view the list of available wireless networks.

Fig. 3

- On Windows® OS (Fig. 3), click the wireless connections icon    from the task bar.

Fig. 4

- On Mac OS® (Fig. 4), click the wireless connections icon  from the menu bar.

Windows is a registered trademark of Microsoft Corporation in the United States and other countries. Mac OS is a registered trademark of Apple Inc.

- C. Click (and Connect to) the Network Name from Fig. 2 in the list of available wireless networks.
- D. Again, lift the Wireless Gateway (Fig. 1). Note the Network Key on the white label (Fig. 2).
- E. Enter the Network Key (case-sensitive) in the Network Security Key field (on Windows) or Password field (on Macs).
- F. Click **OK** or **Connect**. You should now be connected to the Internet.
- G. Test your connection by opening a web browser and typing in a valid URL (www.xfinity.com).

If you need help with WiFi connections, the following links to popular operating systems may help.

- Windows 7®
<http://windows.microsoft.com/en-US/windows7/Add-a-device-or-computer-to-a-network>
- Microsoft Windows XP®
<http://www.microsoft.com/windowsxp/using/networking/setup/wireless.msp>
- Windows Vista®
<http://windows.microsoft.com/en-us/windows-vista/Setting-up-a-wireless-network>
- Apple Mac OS® X 10.0 or greater
<http://support.apple.com/kb/HT2497>

Continue to the Home Network Wizard as described in Steps 2 and 3. In the Home Network Wizard, you'll personalize your Wireless Gateway, set up and secure your new WiFi network. Securing your WiFi network will prevent unauthorized access and may give you faster data speeds.

Personalization

2.PERSONALIZING YOUR WIRELESS GATEWAY

A. Log In

- Open a web browser. Type <http://10.0.0.1> in the address line. The Wireless Gateway Login page (Fig. 1) appears.
- Enter **admin** and **password** as shown.
- Click **Login**. The Home Network Wizard-Step 1 page (Fig. 2) appears.

* Username cannot be changed

Fig. 1

B. Wireless Gateway Name and Password

- Create a name for your Wireless Gateway.
- Enter **password** as shown.
- Create a new password of your choice and re-enter to confirm. (Use this password to change settings on your Wireless Gateway in the future.)

- For future reference, write your Wireless Gateway password here:

* Your password must be at least 8 characters. It should contain both upper and lower case letters and at least 1 number.

Fig. 2

- Click **Next Step**. The Home Network Wizard-Step 2 page (Fig. 3) appears.

3.SETTING UP AND SECURING YOUR WiFi NETWORK

A. WiFi Network Name

- Create a name for the WiFi Network. (This is the name that will appear in the list of available wireless networks.)
- For future reference, write your WiFi Network Name here:

Fig. 3

B. Encryption Method

- Select an encryption method.

The encryption method encrypts the data between your computer and your Wireless Gateway.

WPA-TKIP is the encryption method that is compatible with most computers. WPA2-PSK (AES) provides better performance and security and should be selected, but **only if you are certain that your computer is compatible**. Otherwise, select WPA-TKIP.

C. WiFi Network Password

- Create a Network Password. (This will be required by any computer to access your secure wireless network.)
- For future reference, write your WiFi Network Password here:

D. IMPORTANT Final Step in Setting Up Your Secure Network

- Click **Finish**. Since you have changed your WiFi settings, your computer will no longer be connected to your Wireless Gateway.
- View Available Wireless Networks and select the WiFi Network Name you created in step 3A.
- Enter the WiFi Network Password (case-sensitive) you created in step 3C.
- You should now be connected to the Internet.
- Test your connection by opening a web browser and typing in a valid URL (www.xfinity.com).

Upon initial setup (or after a Factory Reset), when accessing in a <http://10.0.0.1> web browser, the Home Network Wizard appears. Subsequently, you will be directed to the Web Management Interface, where you will be able to view and change settings on your Wireless Gateway.

When connecting additional computers and devices to your Wireless Gateway, use the personalized WiFi Network Name and WiFi Network Password you created in Steps 3A and 3C.

SETTING UP WiFi CONNECTION FOR WPS-COMPATIBLE COMPUTERS

- WPS (WiFi Protected Setup) lets you easily set up secure WiFi networks without entering a Network Key.
- Most WPS-compatible devices will work with your Wireless Gateway. You can easily connect to your WiFi Network using either the default Push Button Configuration (PBC) or the Personal Identification Network (PIN) method. Both methods are described below.
- If you aren't sure if your computer supports WPS, look for a WPS sticker or label (Fig.1) on your computer or device. If none is found, your computer is probably NOT compatible with WPS. In this case, follow the steps under WiFi Connection.

Fig. 1

WPS via PBC Connectivity/One Button Connectivity (Recommended)

1. Press the WPS button on your computer or wireless device. (If your computer doesn't have a physical button, refer to your computer's user guide to enable WPS.)
2. Within 2 minutes, press the WPS button on the top of your Wireless Gateway. (Fig. 2)
3. After a message displays that the connection was successful, your computer/device is connected to your home network.

Fig. 2

Note: When the WPS button is pressed, it will stay lit for 5 minutes (regardless of whether or not the connection was successful). Please wait until the light turns off before retrying or connecting another WPS device.

WPS via PIN Connectivity

1. Open your computer's WPS utility and acquire a PIN number. Make a note of the PIN number. The WPS utility will begin its countdown to 2 minutes.
2. Launch your web browser and type <http://10.0.0.1> in the address line.
3. Log in using **admin** as the username and the password you created in the Home Network Wizard.
4. Select *Gateway > Connection > WiFi*.
5. Before the WPS Utility finishes its countdown, enter the PIN number from Step 1 above in the *Enter Wireless Client's PIN* field.
6. Click **PAIR WITH MY WIFI CLIENT**.
7. Your computer will communicate with your Wireless Gateway and establish a connection.

Note: If your WPS client prompts you to enter the Wireless Gateway's PIN during the WPS Connection, enter the WPN printed on the label on the underside of your Wireless Gateway.

WEB MANAGEMENT INTERFACE

You can view or modify basic information about your Wireless Gateway by accessing the Web Management Interface.

Status Icons

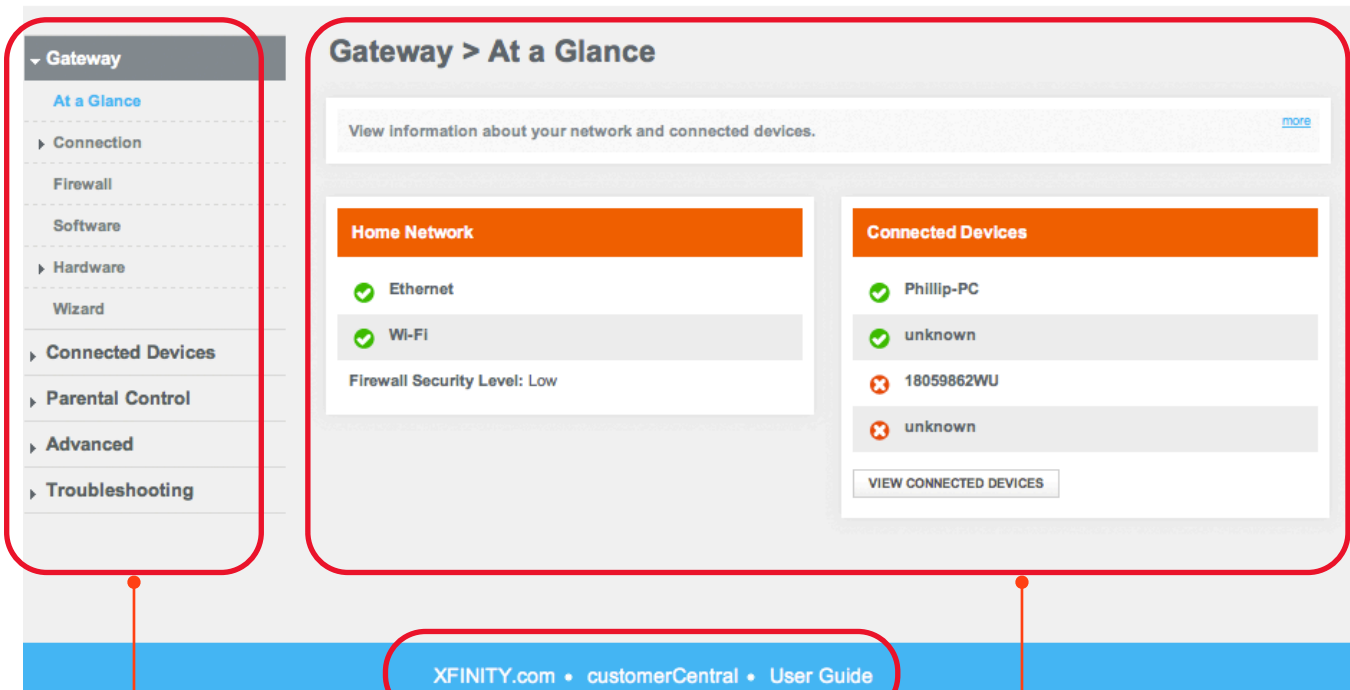

- ▶ Percentage of battery power remaining
- ▶ Gateway's Internet
- ▶ Status of the Gateway's wireless connection
- ▶ Firewall security level access

Log out or change password.

AT A GLANCE

View information about the Wireless Gateway and edit configurations of connected devices

Access from the left navigation menu:

Gateway > At a Glance

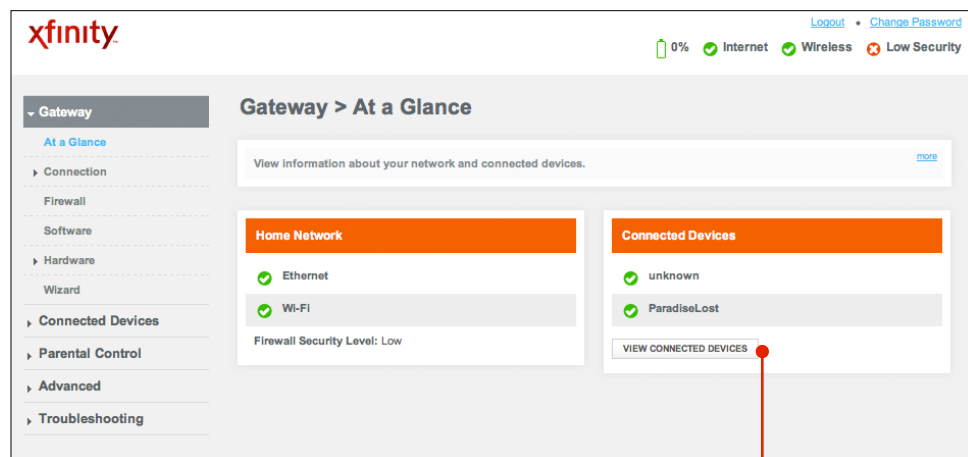

Fig. 1

The **Home Network** section displays the states of both the Ethernet (wired) and WiFi (wireless) networks. You can see connected computers and devices.

Click **View Connected Devices** to view online and offline devices that are connected to your Wireless Gateway.

If you would like to use your existing router instead of the routing functionality on your Wireless Gateway, the Bridge Mode on the Wireless Gateway will need to be enabled. An XFINITY technician can do this during installation, or call 1-800-XFINITY to enable this functionality.

CONNECTION

View information about your Connection Status, such as Local Configuration, WiFi and the XFINITY Network

Access from the left navigation menu:

Gateway > Connection

Status

Displays a summary of your Local IP, WiFi and XFINITY networks

Access from the left navigation menu:

Gateway > Connection > Status

The screenshot displays the 'Gateway > Connection > Status' page. At the top, there is a breadcrumb trail and a sub-header. Below this, a summary box contains the text 'View information about your connection status.' with a 'more' link. The main content is divided into three sections, each with a title bar and an action button:

- Local IP Network** (EDIT button):
 - Local Network: Connected
 - Connection Speed: 1000Mbps
 - IP Address (IPv4): 10.0.0.1
 - IP Address (IPv6): fe80:0:0:0:a00:1
 - Subnet mask: 255.255.255.0
 - DHCP Server: Enable
 - No of Clients connected: 1
 - DHCP Lease Time: 1 Weeks
 - DHCP: Yes
- WiFi Network** (VIEW button):
 - Wireless Network(WiFi 2.4 Active GHZ):
 - Supported Protocols: B, G, N
 - Security: WPA2PSK-AES
 - No of Clients connected: 1
- XFINITY Network** (VIEW button):
 - Internet: Active
 - WAN IP Address: 76.26.112.4
 - DHCP Client: Enable
 - DHCP Expiry Time: 95h:25m:45s

Fig. 1

Local IP Configuration

View information about your local network and edit the LAN DHCP settings (for Advanced Users)

Access from the left navigation menu:

*Gateway > Connection > Local IP Network (or click **VIEW** from Gateway > Connection > Status)*

Fig. 1

Field	Description
IPv4	
Gateway Address	Local IP address of the router
Subnet Mask	Subnet address for the LAN (3 subnets to choose from)
DHCP Beginning Address	First available Local IP Address in the DHCP pool
DHCP Ending Address	Last available Local IP Address in the DHCP pool
DHCP Lease Time	Length of time a local device retains an IP Address before checking back with the DHCP Server on the Wireless Gateway

Note: IPv6 parameters are not configurable at this time.

Connection WiFi

Modify the WiFi settings of your network computers or add additional devices to your network

Access from the left navigation menu:

*Gateway > Connection > WiFi (or click **VIEW** from Gateway > Connection > Status)*

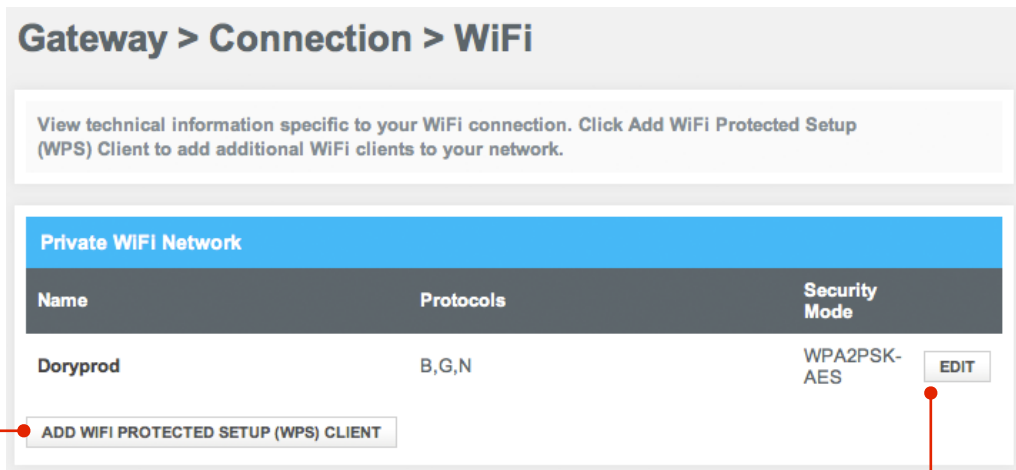

Fig. 1

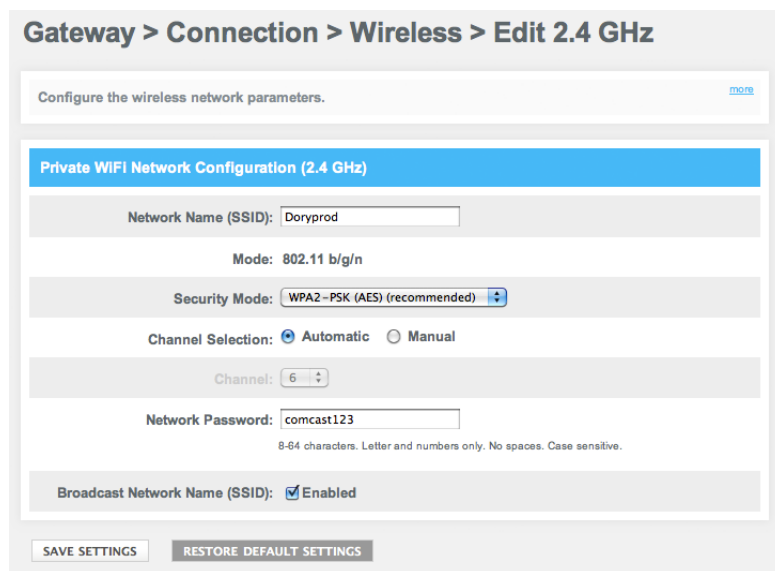

Fig. 2

Click **EDIT** to modify your 2.4 GHz Network settings.

Click **Add WiFi Protected Setup (WPS) Client** to add a device. The **Add Wireless Client** on the next page will appear.

Gateway > Connection > Wireless > Add Wireless Client

Use WPS (WiFi Protected Setup) to simplify your WiFi setup. [more](#)

Add Wireless Client (WPS)

WiFi Protected Setup (WPS): Enabled Disabled

Security: WPA2PSK

Encryption: AES

Network Password: comcast123

Connection Options: Push Button Pair

To pair, select the Pair button and your wireless device will connect within two minutes. You may also press the [pair] button on this device.

PAIR

CANCEL

Fig. 1

FIREWALL

View and modify Firewall settings to block unauthorized/unsafe traffic from accessing your network

Access from the left navigation menu: *Gateway > Firewall*

Gateway > Firewall

Protect your home network

Firewall Security Level

- Maximum Security (High)
- Typical Security (Medium)
- Minimum Security (Low)
- Custom Security

SAVE SETTINGS RESTORE DEFAULT SETTINGS

Maximum Security (High)

Allow (LAN-to-WAN):

- HTTP and HTTPS (TCP port 80, 443)
- DNS (TCP/UDP port 53)
- NTP(TCP port 119, 123)
- email (TCP port 25, 110, 143, 465, 587, 993, 995)
- VPN(GRE, UDP 500, TCP 1723)
- iTunes (TCP port 3689)

Blocked: All unrelated WAN to LAN traffic and enable IDS.

Most of your applications will be blocked except for browsing, email, iTunes and VPN.

Typical Security (Medium)

Allow (LAN-to-WAN): all

Blocked:

- IDS enabled
- IDENT (port 113)
- ICMP request

Peer-to-peer apps:

- kazaa - (TCP/UDP port 1214)
- bittorrent - (TCP port 6881-6999)
- gnutella- (TCP/UDP port 6346)
- vuze - (TCP port 49152-65534)

All of your Peer-to-peer apps are blocked.

Minimum Security (Low)

Allow (LAN-to-WAN): all

Blocked:

- IDS enabled
- IDENT (port 113)

Minimum Security is the default setting. All secure apps are enabled.

Custom Security

Blocked: No access to local network from Internet.

Limited: Commonly used services as given below can be blocked by selecting the check box, all other services will be enabled by default. For blocking a specific port, please use port blocking.

- Block http (TCP port 80, 443)
- Block ICMP
- Block Multicast
- Block Peer-to-peer applications
- Block IDENT (port 113)
- Disable entire firewall

For blocking a specific TCP/UDP port, please use **Managed Services** under **Parental Control**.

Click **Edit** to modify the connection setting for the selected device.

Click **X** to block that device from accessing the internet.

To manually add a computer with a static IP address to your wireless network:

1. Under Online Computers, click **Add Computer with Static IP**. The Add Computer menu appears.
2. Complete the following fields in the Add Computer menu:

Option	Description
Host Name	Host name of the computer you want to add
Connection	Read-only field that displays the network connection of Ethernet
MAC Address	MAC address of the computer you want to add. (Use a colon between each 2-character ID in the MAC address)
Static Address	Static IP address of the computer you want to add (Use a period between each octet in the IP address)
Comments	Optional comments about the computer

3. Click **SAVE** to save your settings (or click **CANCEL** to discard them). If you click **SAVE**, the Computer menu reappears with the computer you added displayed under Offline Computers.
4. To add more computers with static IP addresses, repeat steps 1 through 3.
5. To edit an online computer, click the **EDIT** button next to the computer you want to modify, edit the settings on the Edit Computer menu and click **SAVE**.
6. To delete an online or offline computer, click **X** next to the computer. When the Delete Computer message appears, click **OK** to delete the computer or **CANCEL** to retain it. If you click **OK**, the computer will be removed from the Computers menu.

Parental Control

Parental Controls lets you configure websites, keywords and computers by blocking content or restricting access

MANAGED SITES

Using the Managed Sites menu, you can block access to certain Web sites from local computers

Access from the left navigation menu:

Parental Controls > Managed Sites

Parental Control > Managed Sites

Restrict access to specific websites for identified computers/devices on this network. [more](#)

Enable Managed Sites:

Blocked Sites

URL	When
-----	------

Blocked Keywords

Keyword	When
---------	------

Trusted Computers

Computer Name	IP	Trusted
1 00.25.64.47.29.28	10.0.0.2	<input checked="" type="button" value="No"/> <input type="button" value="Yes"/>
6 WNR1000v2	10.0.0.8	<input checked="" type="button" value="No"/> <input type="button" value="Yes"/>

Fig. 1

If the Blocked Sites, Blocked Keywords and Trusted Computers are grayed out, click **Enable** next to *Enable Managed Sites*. You can then add blocked sites or keywords.

Trusted Computers

Specify the computers you do not want affected. If a computer is selected as a Trusted Computer, it bypasses the configured parental control settings. Under Trusted select **Yes** to make a device a Trusted Computer and **No** if a device is not a Trusted Computer.

Blocked Sites

Enter the URLs of the websites to be blocked and set up a time schedule

Access from the left navigation menu:

*Parental Control > Managed Sites > Click **ADD** next to Blocked Sites*

The screenshot shows a web interface for adding a blocked domain. At the top, there is a breadcrumb trail: "Parental Control > Managed Sites > Add Blocked Domain". Below this is a blue header bar that says "Add Site to be Blocked". The form contains the following fields and options:

- URL:** A text input field.
- Always Block?:** Two radio buttons, "No" and "Yes". The "Yes" button is selected and highlighted in green.
- Set Block Time:**
 - Start from:** Three dropdown menus showing "12", "00", and "AM".
 - End on:** Three dropdown menus showing "11", "59", and "PM".
- Set Blocked Days:**
 - Links for "Select All" and "Select None".
 - Seven days of the week, each with a checked checkbox: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday.
- Buttons:** "SAVE" and "CANCEL" buttons at the bottom.

Fig. 1

- Enter the URL in www.XFINITY.com format. The blocked website may be accessible using its IP address.

Blocked Keywords

Enter keyword(s) that appear on websites you want blocked and set up a time schedule

Access from the left navigation menu:

*Parental Control > Managed Sites > Click **ADD** next to Blocked Keywords*

Parental Control > Managed Sites > Add Blocked Keyword

Add Keyword to be Blocked

Keyword:

Fig. 1

Advanced

PORT FORWARDING

Allows new incoming connections of a certain type to be directed to a certain computer or server

Access from the left navigation menu:

Advanced > Port Forwarding

Fig. 1

Fig. 2

For example, if a new incoming FTP session arrives at the router, the router needs to know which server is responsible for this traffic. The Port Forwarding rules tell the router which server should get this traffic based on the incoming port number. To use port forwarding, use static IP addresses for the computers (servers) to which the traffic will be forwarded to.

PORT TRIGGERING

Temporarily opens an incoming port to a particular computer when that computer initiates a particular outgoing connection (the trigger)

Access from the left navigation menu: *Advanced > Port Triggering*

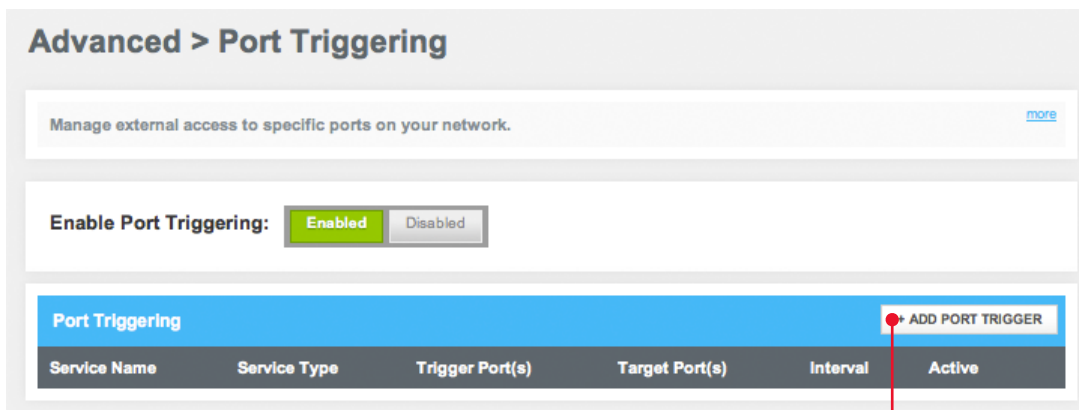

Fig. 1

The **Add Port Trigger** button can be clicked only when Enable Port Triggering is **Enabled**.

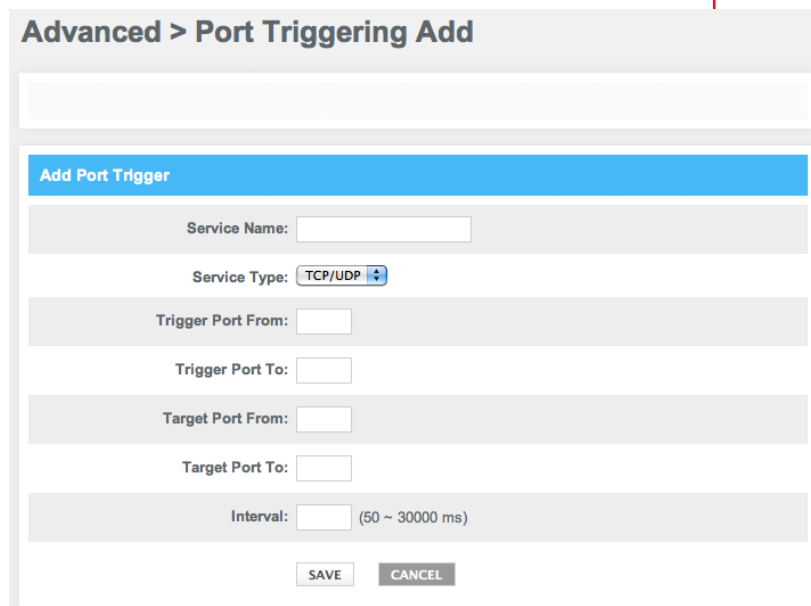

Fig. 2

You may not need to configure the interval for port triggering.

DMZ

Configure a single computer on your LAN to open all of its ports

Access from the left navigation menu:

Advanced > DMZ

The screenshot shows the 'Advanced > DMZ' configuration page. At the top, there is a header 'Advanced > DMZ'. Below it is a descriptive box: 'DMZ allows a single computer on your LAN to open all of its ports.' with a 'more' link. A blue bar below this reads 'DMZ (Demilitarized Zone)'. The main configuration area has a grey background and contains the following elements: 'Enable DMZ:' with two radio buttons, 'Enabled' (which is selected and highlighted in green) and 'Disabled'; 'DMZ Host:' followed by four input fields containing the IP address '10', '0', '0', and '8' separated by dots; and a 'SAVE' button at the bottom.

Fig. 1

DEVICE DISCOVERY

Displays the settings for automatic device discovery

Device Discovery uses Plug and Play (UPnP) to automatically configure the router and devices for various Internet applications, such as gaming, media sharing and video conferencing.

Access from the left navigation menu:

Advanced > Device Discovery

The screenshot shows the 'Advanced > Device Discovery' settings page. At the top, there is a grey header with the title 'Advanced > Device Discovery'. Below the header is a white box containing the text 'UPnP enabled Gateway discovers all UPnP enabled client devices.' with a 'more' link on the right. The main content area has a blue header 'Device Discovery'. Below this, there are four rows of settings, each with a label and a control element: 'Enable UPnP:' with a green 'Enabled' button and a grey 'Disabled' button; 'Advertisement Period:' with a text input field containing '30' and the label 'minutes'; 'Time To Live:' with a text input field containing '5' and the label 'hops'; and 'Enable Zero Config:' with a green 'Enabled' button and a grey 'Disabled' button. At the bottom of the settings area is a 'SAVE' button.

Fig. 1

DIAGNOSTIC TOOLS

Run a Connectivity/IP Address Check test to troubleshoot connectivity issues to a website URL or IP address

Access from the left navigation menu:

Troubleshooting > Diagnostic Tools

The screenshot displays the 'Troubleshooting > Network Diagnostic Tools' page. At the top, there is a header with the text 'Troubleshoot your device issues using diagnostic tools.' and a 'more' link. Below this, there are two main sections. The first section, 'Test Connectivity Results', shows 'Connectivity to the Internet: Active', 'Packets Sent: 4', 'Packets Received: 4', and 'Destination Address: www.comcast.net' with a 'Count: 4'. A 'TEST CONNECTIVITY' button is located below this section. The second section, 'Check for IP Address Results', shows 'IP Address: 10 . 0 . 0 . 1' with a 'Count: 4' and 'Connectivity: OK'. A 'CHECK FOR IP ADDRESSES' button is located below this section.

Fig. 1

- *Test Connectivity Results* tests your Internet connection. Enter a URL, such as www.xfinity.com, in the *Destination Address* field. Click **Test Connectivity**. If there is no connectivity or the URL is invalid, then the test will fail.
- *Check for IP Address Results* determines if an IP address is accessible. Enter an IP address, then click **Check for IP Address**.

RESTORE/RESET GATEWAY

Enables the resetting of your Wireless Gateway and restoring of factory defaults

CAUTION: If you select **Restore Factory Settings**, be certain you want to reset ALL settings (passwords, parental controls and firewall settings) before proceeding! You will lose ALL customized settings made to your Wireless Gateway.

Please also note that a Factory Restore will take your Wireless Gateway out of Bridge Mode if it had been previously enabled. Call 1-800-XFINITY if you would like to enable Bridge Mode again.

Access from the left navigation menu:

Troubleshooting > Restore/Reset Gateway

Fig. 1

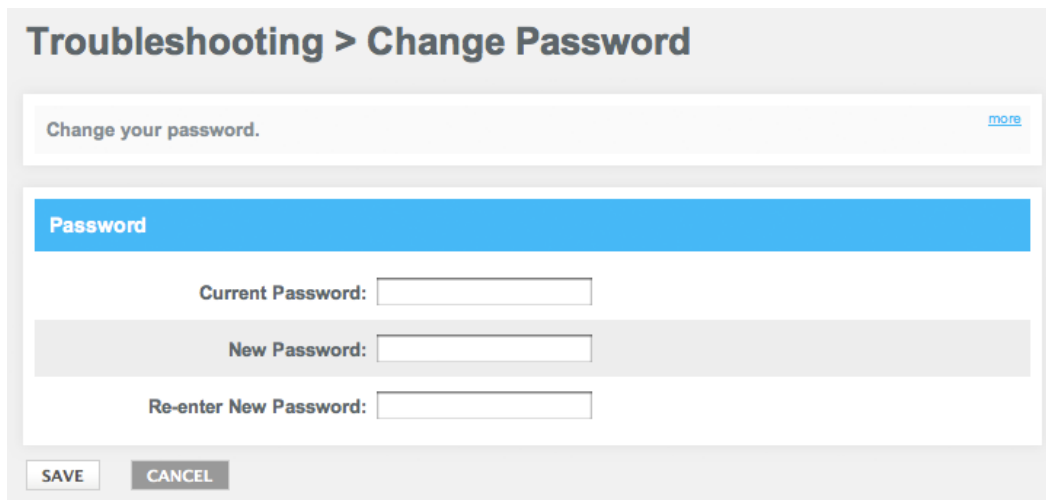

- If you click **Reset** when someone is using the phone, you'll see a warning message that a Voice Call is in Progress and will be disconnected if the Wireless Gateway is rebooted.
- The Wireless Gateway will take a few seconds to reset. Internet connectivity through the Ethernet may be lost momentarily.

CHANGE PASSWORD

Change the password for your Wireless Gateway

Access from the left navigation menu:

Troubleshooting > Change Password

The screenshot shows a web interface for changing a password. At the top, the breadcrumb navigation reads "Troubleshooting > Change Password". Below this is a white box with the text "Change your password." and a blue "more" link. A blue header bar labeled "Password" is followed by three input fields: "Current Password:", "New Password:", and "Re-enter New Password:". At the bottom, there are two buttons: "SAVE" and "CANCEL".

Fig. 1

- Enter your current password.
- Create a new password and re-enter to confirm.
- Click **SAVE**.

Regulatory Information

COMPLIANCE STATEMENTS

FCC Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against radio interference in a commercial environment.

This equipment can generate, use and radiate radio frequency energy and, if not installed and used in accordance with the instructions in this manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause interference, in which case the user, at his own expense, will be required to take whatever measures are necessary to correct the interference.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

IEEE 802.11b or 802.11g operation of this product in the U.S.A is firmware-limited to channels 1 through 11.

IMPORTANT NOTE:**FCC Radiation Exposure Statement:**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination. The firmware setting is not accessible by the end user.

Note to CATV System Installer - This reminder is provided to call the CATV systems installer's attention to Section 820-93 of the National Electric Code which provide guideline for proper grounding and, in particular, specify that the Coaxial cable shield shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

FCC Part 68 Statement

This equipment complies with Part 68 of the FCC Rules. A label is attached to the equipment that contains, among other information, its FCC registration number and ringer equivalence number. If requested, this information must be provided to the telephone company.

This equipment uses the following USOC Jack: RJ-11.

An FCC-compliant telephone cord and modular plug is provided with this equipment. This equipment is designed to be connected to the telephone network or premises wiring using a compatible modular jack, which is FCC Part 68 compliant. Connection to the telephone network should be made by using the standard modular telephone jack.

The REN is useful to determine the quantity of devices that may be connected to the telephone line and still have all of those devices ring when your telephone number is called. In most, but not all areas, the sum of RENs should not exceed 5. To be certain of the number of devices that may be connected to the line, as determined by the total RENs, contact the telephone company to determine the maximum REN for the calling area.

If this equipment causes harm to the telephone network, the telephone company may discontinue your service temporarily. If advance notice is not practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

The telephone company may make changes in its facilities, equipment, operations, or procedures that could affect the operation of the equipment. If this happens, the telephone company will provide advance notice in order for you to make the necessary modifications in order to maintain uninterrupted service.

In the event this equipment should fail to operate properly, disconnect the unit from the telephone line. Try using another FCC approved device in the same telephone jack. If the trouble persists, call the telephone company repair service bureau. If the trouble does not persist and appears to be with this unit, disconnect the unit from the telephone line and discontinue use of the unit until it is repaired.

Please note that the telephone company may ask that you disconnect the equipment from the telephone network until the problem has been corrected or until you are sure that the equipment is not malfunctioning.

The user must use the accessories and cables supplied by the manufacturer to get optimum performance from the product.

No repairs may be done by the customer. If trouble is experienced with this equipment, please contact your authorized support provider for repair and warranty information. If the trouble is causing harm to the telephone network, the telephone company may request you remove the equipment from the network until the problem is resolved.

This equipment cannot be used on telephone company provided coin service. Connection to Party Line Service is subject to state tariffs.
