# About Your Wireless Gateway

Your Wireless Gateway is the next generation cable modem and Voice-Over-IP (VoIP) adapter, integrated with home gateway features. It combines a two-line Embedded Media Terminal Adapter with an integrated router, wireless transmitter and four Gigabit Ethernet RJ45 ports. The XFINITY Wireless Gateway has been designed to meet PacketCable™ 1.5 and 2.0 and DOCSIS® 3.0 specifications.

## Here's what you get

...when you subscribe to both XFINITY Digital Voice and High-Speed Internet services:

- **WiFi Technology** — WiFi is a way of connecting your computers and other devices to the network without wires. WiFi technology uses radio frequency to connect to the Internet wirelessly and gives you the freedom to connect from computers in your home network. Your Wireless Gateway can connect to b, g and N clients simultaneously.
- **Fast Download Speed** — Your Wireless Gateway is DOCSIS 3.0 compliant with speeds up to eight times faster than DOCSIS 2.0 cable modems.
- **Easy Connectivity** — Connect any WPS-compatible computer or device with just one button.
- **Security** — Because WiFi networks send information over radio waves, signals from your wireless network can be intercepted by unauthorized users. Use the simple Home Network Wizard to securely set up your WiFi broadband connection for WiFi enabled devices.
- **Convenience** — Simultaneously use four Ethernet ports for wired devices and 802.11b/g/n connectivity for wireless devices. Choice between wireless LAN (WLAN) or wired Ethernet LAN connections.
- **Flexibility** — the ability to support two lines of telephone service, as well as high speed data; the ability to use your own router with your Wireless Gateway
- **Telephony Services** — Complies with PacketCable™ 1.5 or 1.0
- **Protection** — Lithium Ion backup battery back-up (included with XFINITY Voice subscription)

If you haven't already done so, please activate both XFINITY Voice and Internet services if you subscribe to both, or just XFINITY Internet services if you subscribe only to high-speed data services. Refer to the user guide you received with each of these services for activation instructions and information about XFINITY Voice and Internet features.

# Overview

## FRONT PANEL

The front panel of your Wireless Gateway features a set of LED indicators which shows the status of your Gateway and can simplify troubleshooting.

Fig. 1

Table 1. Front Panel LED Indicators	
Power	Blinking=power failure and during battery backup. ON=power being supplied. OFF=power is not being supplied.
US/DS	Blinking=ranging is in progress. ON=ranging is complete on 1 channel only. OFF=scanning for DS channel.
Online	Blinking=cable interface acquiring IP, Time of Day, Cable Modem configuration. ON=Gateway is operational. OFF=Gateway is offline.
WiFi	Blinking=data is transmitting over the Gateway's WiFi interface. ON=WiFi is enabled. OFF=WiFi is disabled.
Tel1	Blinking=Tel line 1 is in use. ON=Gateway's Tel 1 port is online. OFF=Gateway's Tel 1 port is not online.
Tel2	Blinking=Tel line 2 is in use. ON=Gateway's Tel 2 port is online. OFF=Gateway's Tel 2 port is not online.
Battery	Blinking=battery power is low. Use AC power as soon as possible. ON=Gateway is operating on AC power, battery is not charging. OFF=(a) If Battery LED is off and Power LED is blinking, then device is in battery backup mode. (b) If Battery LED is off and Power LED is solid, this indicates there is no battery or battery is not properly functioning. Solid Glow=battery is charging.

## REAR PANEL CONNECTORS AND CONTROLS

The rear panel of your Wireless Gateway features a reset button, as well as the ports for attaching the supplied power adapter and connecting additional devices.

Fig. 1

LED	Table 1. Gigabit Ethernet Connectors LED Indicators
Green	Indicates Gigabit Ethernet in use
Orange	Indicates Fast Ethernet in use

### \* Reset Button

To protect against accidental reset, the reset button is recessed on the rear panel. By pressing the reset button for varying lengths of time, you can perform two types of reset operations with the Wireless Gateway.

- **Normal Reset** – reboots the Wireless Gateway but retains current configuration settings.  
*Use a thin object, press the reset button for at least 2-5 seconds and release.*
- **Factory Reset** – deletes all changes ever made to the original configuration settings and restores to factory configuration.  
*Use a thin object, press and hold the reset button for 15 seconds or more before releasing.*

**CAUTION:** If you select Restore Factory Settings, be certain you want to reset ALL settings (passwords, parental controls and firewall settings) before proceeding! You will lose all customized settings you may have made to your Wireless Gateway. Please also note that a Factory Reboot will take your Wireless Gateway out of Bridge Mode if it had been previously enabled. Call 1-800-XFINITY if you would like to re-enable Bridge Mode.

**Note:** You can also reset your Wireless Gateway using the Web Management Interface (see [page 35](#)).

## TOP PANEL

The top panel of your Wireless Gateway features a **WPS** button (Fig. 1). WPS (or WiFi Protection Setup) lets you securely set up a WiFi network without having to enter the Network Key.

[See page 11.](#)

Fig. 1

## BOTTOM PANEL

The bottom panel of your Wireless Gateway contains a panel for installing the backup battery. The battery will provide backup for voice service in case of a local power loss. The battery backup is not intended to take the place of AC power.

To install a battery into your Gateway, use the following procedure.

1. Place the Wireless Gateway on its side on a table.
2. Remove the battery compartment door on the bottom panel and set it aside.
3. Insert the battery into the battery compartment with the polarity in place.
4. Close the battery compartment.

**Notes:** A battery is needed to enable voice service availability in the event of a power outage. A battery is included with your Wireless Gateway *only if you subscribe to XFINITY Voice*. If you did not receive a battery and you are an XFINITY Voice subscriber, please call 1-800-XFINITY.

By accessing the Battery menu from the Gateway's Web interface, you can view status information about the battery.

## BOTTOM LABEL

The bottom label of your Wireless Gateway will display the following information:

WiFi Network Name	HOME - XXXX (where XXXX is the last 4 digits of the Cable Modem MAC)
Encryption	WPA-TKIP
Network Password	Printed on the label
WPS PIN	Printed on the label

## DEFAULT CONFIGURATIONS OF THE WIRELESS GATEWAY

Following are the factory default configurations:

WPS	Enabled
Gateway IP	<a href="http://10.0.0.1">http://10.0.0.1</a>
Firewall Configuration	Low (No ports are blocked)
UPnP	Enabled
All other features are disabled by default. In order to enable other features, please access the Web Management Interface.	

# Basic Wireless Gateway Information

You can view or modify basic information about your Wireless Gateway by accessing the Web Management Interface.

Make sure your computer or laptop is connected to one of the ethernet ports on your Wireless Gateway. Open a web browser\* and typing <http://10.0.0.1> in the address line.

\* Compatible web browsers include Internet Explorer 6.0+, Firefox 3.0+ and Safari. Your computer does not have to be online to configure your Wireless Gateway.

Find out the encryption methods supported by your computer before setting up your WiFi Network.

Upon initial setup (or after a Factory Reset), you will see the Home Network Wizard's three administrative pages as described below.

## Home Network Wizard

1. On the Administrative Login screen (Fig. 1), type the following default information to login:

**Default Username: admin**

(The username cannot be changed.)

**Default Password: password**

Click **LOGIN**.

Fig. 1

2. Change the administrative password (Fig. 2) to prevent unauthorized users from changing settings on your Wireless Gateway. Use a strong password with at least eight characters that contains both letters and numbers.

Record your New Password in order to access the Gateway pages in the future.

Fig. 2

3. Enter a WiFi network name of your preference. Remote computers use this name to identify the router. It is case-sensitive and can be up to 32 characters in length. A valid WiFi network name can contain only letters, numbers, hyphens or underscores. No spaces or periods are allowed. i.e. XFINITY-12456.
4. Select an encryption method that is supported by your computer or device (Fig. 3).
5. Depending on your selection, you may be required to enter a **Network Password**. Click **FINISH**.

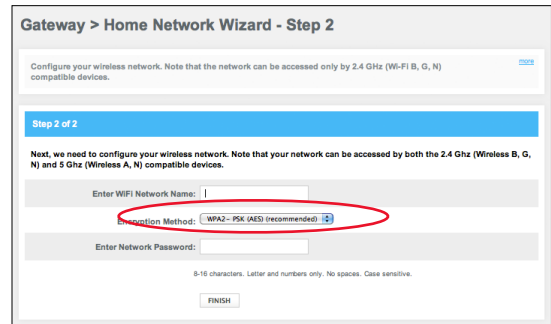

Fig. 3

Note: The Wireless Gateway can be connected to wireless B, G and N devices operating at 2.4 GHz.

After your initial setup and on subsequent logins, when you access <http://10.0.0.1>, you will see the Web Management Interface screen as described on the following page.

## Web Management Interface Menus

Access Menus (and Submenus)	Description
Gateway > At a Glance	Displays information about your home network, connected devices and recent network updates
Gateway > Connection	Displays the following 3 submenus to:
Gateway > Connection > Local IP	View and reset your local IPv4 settings
Gateway > Connection > WiFi	View and edit basic and advanced wireless settings
Gateway > Connection > XFINITY	View XFINITY network settings and initialization procedures, including cable modem, downstream and upstream information
Gateway > Firewall	Configure the security level of the Wireless Gateway's internal firewall
Gateway > Software	View system software information
Gateway > Hardware > System Hardware	View information about the Wireless Gateway's system hardware
Gateway > Hardware > Battery	View information about the Wireless Gateway's internal battery (for XFINITY Voice only)
Gateway > Hardware > LAN	View the link status and Media Access Control (MAC) address for each of the 4 Ethernet ports
Gateway > Hardware > WiFi	View the status and MAC address of the Gateway's WiFi port
Gateway > Wizard	Access a wizard to set up your home network
Connected Devices	Displays the Computer submenu for adding online computers and viewing computers that are offline
Parental Control	Displays the 4 following submenus for:
Parental Control > Managed Sites	Blocked sites, blocked keywords and trusted computers
Parental Control > Managed Services	Blocked services and trusted computers
Parental Control > Managed Devices	Managed and blocked devices
Parental Control > Reports	Generating reports containing selected Log Messages
Advanced	Displays submenus to:
Advanced > Port Forwarding	Enable/disable the port forwarding feature
Advanced > Port Triggering	Enable/disable the port triggering feature
Advanced > Port Blocking	Enable/disable the port blocking feature
Advanced > Device Discovery	Enable/disable the Universal Plug and Play (uPnP) feature for dynamic connectivity to network devices
Troubleshooting	Displays submenus to:
Troubleshooting > Logs	Configure log filters and download/print system logs
Troubleshooting > Diagnostic Tools	Test connectivity to a URL or IP address
Troubleshooting > Restore/Reboot Gateway	Reset the Wireless Gateway or restore factory settings

## WEB MANAGEMENT INTERFACE

### Status Icons

- ▶ Percentage of battery power remaining
- ▶ Gateway's Internet
- ▶ Status of the Gateway's wireless connection
- ▶ Firewall security level access

Log out of the Web Management Interface or change your password.

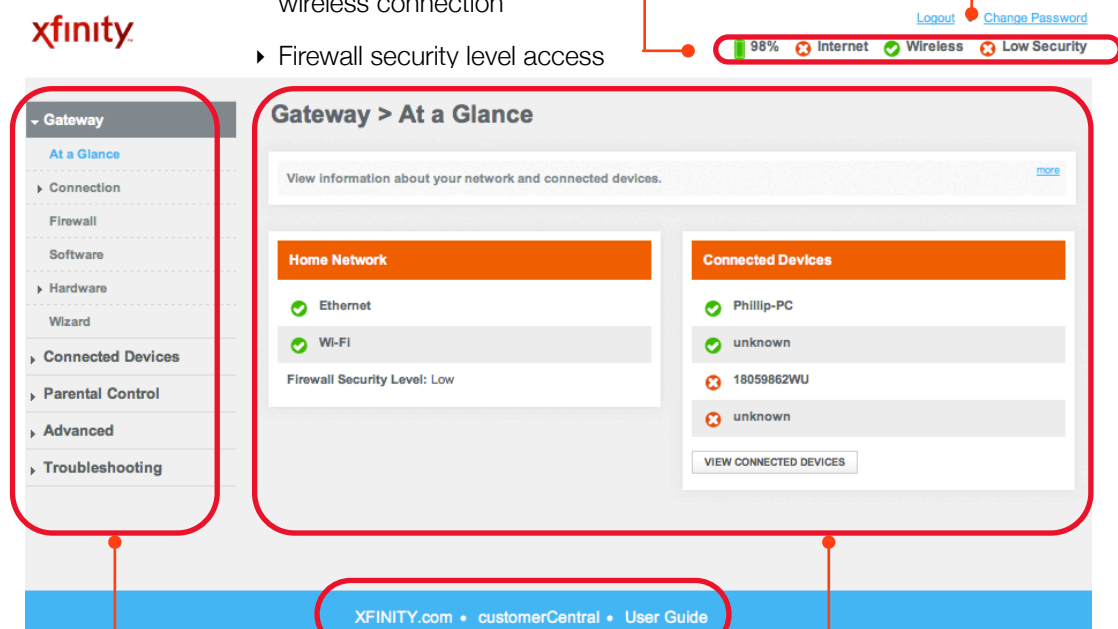

Fig. 1

From the menu bar, select a category to configure your Wireless Gateway settings.

When you click a category from the left menu bar, associated information and configuration settings appear in the main area.

From the links at the bottom of the page, you can access XFINITY.com and customerCentral.

## AT A GLANCE

View information about your Wireless Gateway and edit configurations of connected devices

**Note:** If you would like to use your existing router instead of using the routing functionality on your Wireless Gateway, the Bridge Mode on the Wireless Gateway will need to be enabled. An XFINITY technician can do this during installation, or call 1-800-XFIITY.

Access from the left navigation menu:

*Gateway > At a Glance*

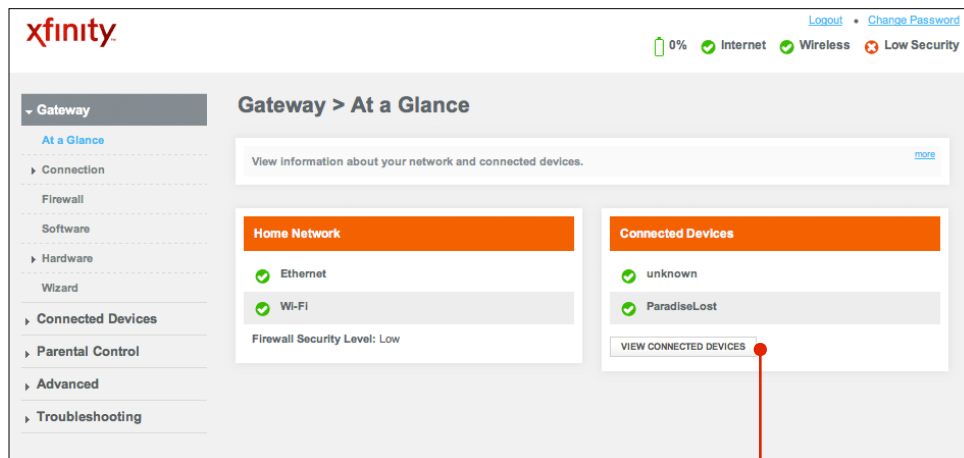

Fig. 1

The **Home Network** section displays the states of both the Ethernet and WiFi networks. You can see the computers and devices connected to your Wireless Gateway.

Click **View Connected Devices** to view the Connected Devices screen (see [page 24](#)), which displays online and offline devices that are connected to your Wireless Gateway.

## CONNECTION

View information about your Wireless Gateway, such as Connection Status, Local Configuration, WiFi and the XFINITY Network

Access from the left navigation menu:

*Gateway > Connection*

### Connection Status

Displays a summary of your Local IP, WiFi and XFINITY networks

Access from the left navigation menu:

*Gateway > Connection > Status*

The screenshot displays the 'Gateway > Connection > Status' page. At the top, there is a header with the breadcrumb 'Gateway > Connection > Status' and a sub-header 'View information about your connection status.' with a 'more' link. Below this, there are three main sections:

- Local IP Network** (with an 'EDIT' button):
  - Local Network: Connected
  - Connection Speed: 1000Mbps
  - IP Address (IPv4): 10.0.0.1
  - IP Address (IPv6): fe80:0:0:0:0:a00:1
  - Subnet mask: 255.255.255.0
  - DHCP Server: Enable
  - No of Clients connected: 1
  - DHCP Lease Time: 1 Weeks
  - DHCP: Yes
- WiFi Network** (with a 'VIEW' button):
  - Wireless Network(WiFi 2.4 GHz): Active
  - Supported Protocols: B,G,N
  - Security: WPA2PSK-AES
  - No of Clients connected: 1
- XFINITY Network** (with a 'VIEW' button):
  - Internet: Active
  - WAN IP Address: 76.26.112.4
  - DHCP Client: Enable
  - DHCP Expiry Time: 95h:25m:45s

Fig. 1

## Local IP Configuration

View information about your local network. You may edit the LAN DHCP settings, if desired (for Advanced Users).

Access from the left navigation menu:

*Gateway > Connection > Local IP Network (or click **VIEW** from Gateway > Connection > Status)*

Fig. 1

Field	Description
<b>IPv4</b>	
Gateway Address	Local IP address of the router
Subnet Mask	Subnet address for the LAN (3 subnets to choose from)
DHCP Beginning Address	First available Local IP Address in the DHCP pool
DHCP Ending Address	Last available Local IP Address in the DHCP pool
DHCP Lease Time	Length of time a local device retains an IP Address before checking back with the DHCP Server on the Wireless Gateway

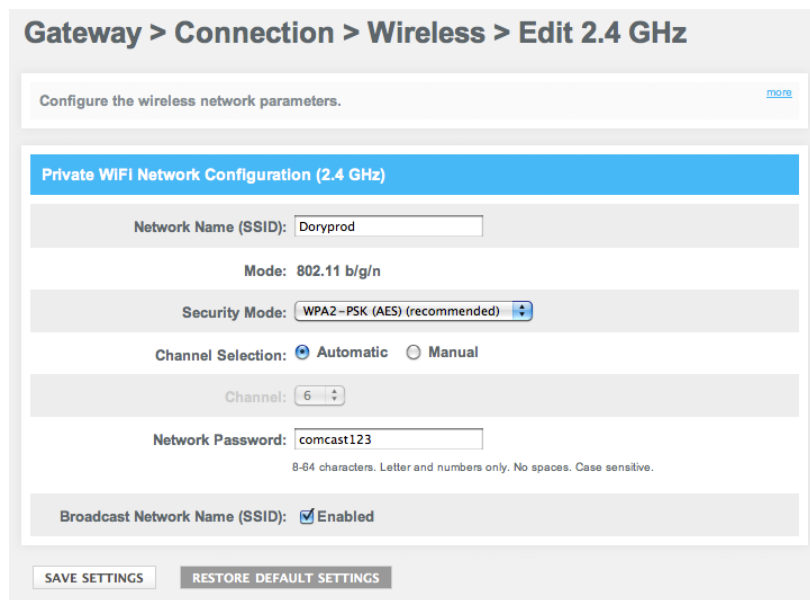

Note: IPv6 parameters are not configurable.

## WiFi

View and configure your WiFi network

Access from the left navigation menu:

*Gateway > Connection > WiFi (or click **VIEW** from Gateway > Connection > Status)*

Click **EDIT** to modify your 2.4 GHz Network settings.

Fig. 2

Click **Add WiFi Protected Setup (WPS) Client** to add a device. Follow the WiFi Setup steps on the next page.

Note: A valid WiFi network name can contain only letters, numbers, hyphens or underscores.

Fig. 1

## WiFi SETUP

1. Enter a *Network Name (SSID)* of your choice. Remote computers use this name to identify the router. It is case-sensitive and can be up to 32 characters in length. A valid WiFi network name can contain only letters, numbers, hyphens or underscores. No spaces or periods allowed. i.e. XFINITY-12456.
2. Select the *Security Mode (Encryption Method)*. Each mode in the option provides a certain level of network security. *The Encryption Method you select must be supported by your computer.* Please refer to your computer's user manual to verify which method(s) your computer supports.

Unless your computer is incompatible, the Security Mode of **WPA2-PSK (AES)** is the recommended option. WPA/WPA2 offers a higher level of security than WEP. Your Wireless Gateway supports AES encryption to protect the data transmitted over the network.

3. Enter a *Network Password* (see following requirements). Every device in the wireless network will require this password. No password is required if you choose *Open (risky)* mode. Use of this option is NOT RECOMMENDED because any external device within range can access your network.

WPA2-PSK-AES = minimum of 8 and maximum of 64 characters  
 WEP-64 = exactly 10 hexadecimal characters (0-9, A-F) are required  
 WEP-128 = exactly 26 hexadecimal characters (0-9, A-F) are required  
 WPA-PSK-TKIP = minimum of 8 and maximum of 64 characters

Record your new password here:

---

4. Verify that the *Broadcast Network Name (SSID)* box is checked. The default state is to enable broadcasting of SSID to allow other users to see and join the network. Click **SAVE SETTINGS**.

## Connecting a Computer or Other Device to your WiFi Network

After you've changed your network password, personalized your network name and selected an encryption method, you are ready to connect a computer or laptop using either of the following two methods.

- Manual setup using the Network Key
- WiFi Protected Setup (WPS lets you simply and securely set up a WiFi network without entering a Network Key)

## For Non-WiFi Protected Setup (WPS) Computers

- You need to manually connect to your WiFi network. Follow the steps based on your computer's operating system. Visit the appropriate manufacturer's website listed below for specific steps.
  - Windows XP  
<http://www.microsoft.com/windowsxp/using/networking/setup/wireless.msp>
  - Windows Vista  
<http://windows.microsoft.com/en-us/windows-vista/Setting-up-a-wireless-network>
  - Windows 7  
<http://windows.microsoft.com/en-US/windows7/Add-a-device-or-computer-to-a-network>
  - Mac OS X 10.0 or greater  
<http://support.apple.com/kb/HT2497>
- Use the same Network Name and Password you created during the Home Network Wizard.

## For WiFi Protected Setup (WPS) Computers

### WPS Method for WiFi Connection

- You can easily connect to your WiFi Network using either the default Push Button Configuration (PBC) or the Personal Identification Network (PIN) method.
- If you don't know if your computer supports WPS, refer to your computer's documentation. Any WPS-compatible device will work with your Wireless Gateway.

### WPS via PBC Connectivity/One Button Connectivity (Recommended)

1. Press the WPS button on your computer or wireless. (If your computer doesn't have a physical button, refer to your computer's user guide to enable WPS.)
2. Within 2 minutes, press the WPS button on the top of your Wireless Gateway. (Fig. 1)
3. Your computer will communicate with your Wireless Gateway and establish a connection.

Fig. 1

Note: When the WPS button is pressed, it will stay lit for 5 minutes (regardless of whether or not the connection was successful). Please wait until the light turns off before connecting the next WPS client.

### WPS via PIN Connectivity

1. Open your computer's WPS utility and acquire a PIN number. Make a note of the PIN number. The WPS utility will begin its countdown to 2 minutes.
2. Launch your web browser and type **http://10.10.0.1** in the address line.
3. Log in using the username (**admin**) and the password you created in the Home Network Wizard.
4. Select *Gateway > Connection > WiFi*.
5. Before the WPS Utility finishes its countdown, enter the PIN number from Step 1 above in the *Enter Wireless Client's PIN* field. (Fig. 1)
6. Click **PAIR WITH MY WIFI CLIENT**.
7. Your computer will communicate with your Wireless Gateway and establish a connection.

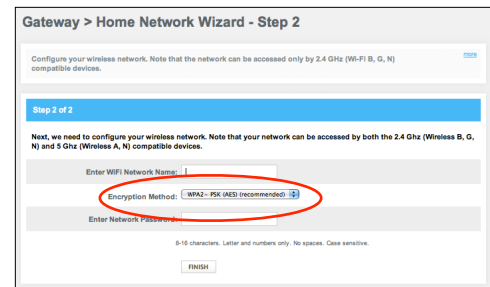

Fig. 1

Note: If your WPS clients prompts you to enter the Wireless Gateway's PIN while connecting using WPS, then enter the WPN printed on the label of your Wireless Gateway's box.

## XFINITY Network

View details about the XFINITY Network, including initialization procedures, cable modem settings, downstream and upstream information. The information show automatically refreshes every 10 seconds.

Access from the left navigation menu:

*Gateway > Connection > XFINITY Network (or click **VIEW** from Gateway > Connection > Status)*

**Gateway > Connection > XFINITY Network**

View technical information related to your XFINITY network connection. [more](#)

### XFINITY Network

Internet: Active

System Uptime: 000 days 01h:30m:17s

WAN IP Address: 76.26.112.4

DHCP Client: Enable

DHCP Expiry Time: 95h:01m:09s

WAN MAC: 00:22:2D:9D:B5:53

eMTA MAC: 00:22:2D:9D:B5:51

CM MAC: 00:22:2D:9D:B5:50

### Initialization Procedure

Initialize Hardware: Complete

Acquire Downstream Channel: Complete

Upstream Ranging: Complete

DHCP Bound: Complete

Set Time-of-Day: Complete

Configuration File Download: Complete

Registration: Complete

### Cable Modem

HW Version: 1A

Vendor: SMC Networks

BOOT Version: PSPU-Boot(BBU) 1.0.9.15+H2.6

Core Version: 2.1.2.5

Model: SMC-D3GNV

Product Type: SMC-D3GNV

Flash Part: 32 MB

Download Version: 2.1.2.5

Serial Num: H2A091D7A1

Downstream	Channel Bonding Value							
Index	1	2	3	4	5	6	7	8
Lock Status	Locked	Locked	Locked	Not locked	Not locked	Not locked	Not locked	Not locked

Power Level	58.2100 dBmV			
Modulation	16QAM			
Channel ID	1			

If you need to contact XFINITY for support, you may be asked to provide information displayed on this screen.

Fig. 1

## FIREWALL

View and modify Firewall settings to block unauthorized/unsafe traffic from accessing your network

Access from the left navigation menu: *Gateway > Firewall*

**Gateway > Firewall**

Protect your home network

**Firewall Security Level**

- Maximum Security (High)**
- Typical Security (Medium)**
- Minimum Security (Low)**
- Custom Security**

SAVE SETTINGS   RESTORE DEFAULT SETTINGS

**Maximum Security (High)**

**Allow (LAN-to-WAN):**  
 HTTP and HTTPS (TCP port 80, 443)  
 DNS (TCP/UDP port 53)  
 NTP(TCP port 119, 123)  
 email (TCP port 25, 110, 143, 465, 587, 993, 995)  
 VPN(GRE, UDP 500, TCP 1723)  
 iTunes (TCP port 3689)

**Blocked:** All unrelated WAN to LAN traffic and enable IDS.

Most of your applications will be blocked except for browsing, email, iTunes and VPN.

**Typical Security (Medium)**

**Allow (LAN-to-WAN):** all

**Blocked:**  
 IDS enabled  
 IDENT (port 113)  
 ICMP request

**Peer-to-peer apps:**  
 kazaa - (TCP/UDP port 1214)  
 bittorrent - (TCP port 6881-6999)  
 gnutella - (TCP/UDP port 6346)  
 vuze - (TCP port 49152-65534)

All of your Peer-to-peer apps are blocked.

**Minimum Security (Low)**

**Allow (LAN-to-WAN):** all

**Blocked:**  
 IDS enabled  
 IDENT (port 113)

**Minimum Security is the default setting.** All secure is enabled.

**Custom Security**

**Blocked:** No access to local network from Internet.

**Limited:** Commonly used services as given below can be blocked by selecting the check box, all other services will be enabled by default. For blocking a specific port, please use port blocking.

- Block http (TCP port 80, 443)
- Block ICMP
- Block Multicast
- Block Peer-to-peer applications
- Block IDENT (port 113)
- Disable entire firewall

For blocking a specific TCP/UDP port, please use **Managed Services** under **Parental Control**.

Change the IP address assignment method for Online Computers. [more](#)

**Edit Computer**

Host Name: Phillip-PC

Connection: Ethernet

Configuration:  DHCP  Static IP

MAC Address: 00.22.5f.c3.ac.9b

Comments:

[SAVE](#) [CANCEL](#)

Click **Edit** to modify the connection setting for the corresponding device.

Click **X** to block that device from accessing the internet.

To manually add a computer with a static IP address to your wireless network:

1. Under Online Computers, click **Add Computer with Static IP**. The Add Computer menu appears.
2. Complete the following fields in the Add Computer menu:

Option	Description
Host Name	Host name of the computer you want to add
Connection	Read-only field that displays the network connection of Ethernet
MAC Address	MAC address of the computer you want to add. (Use a colon between each 2-character ID in the MAC address)
Static Address	Static IP address of the computer you want to add (Use a period between each octet in the IP address)
Comments	Optional comments about the computer

3. Click **SAVE** to save your settings (or click **CANCEL** to discard them). If you click **SAVE**, the Computer menu reappears, with the computer you added displayed under Offline Computers.
4. To add more computers with static IP addresses, repeat steps 1 through 3.
5. To edit an online computer, click the **EDIT** button next to the computer you want to modify, edit the settings on the Edit Computer menu and click **SAVE**.
6. To delete an online or offline computer, click the **X** next to the computer. When the Delete Computer message appears, click OK to delete the computer or **CANCEL** to retain it. If you clicked OK, the computer is removed from the Computers menu.

# Parental Control

Using the Parental Controls menu, you can configure websites, keywords and computers by blocking content or restricting access

## MANAGED SITES

Using the Managed Sites menu, you can block access to certain Web sites from local computers

Access from the left navigation menu:

*Parental Controls > Managed Sites*

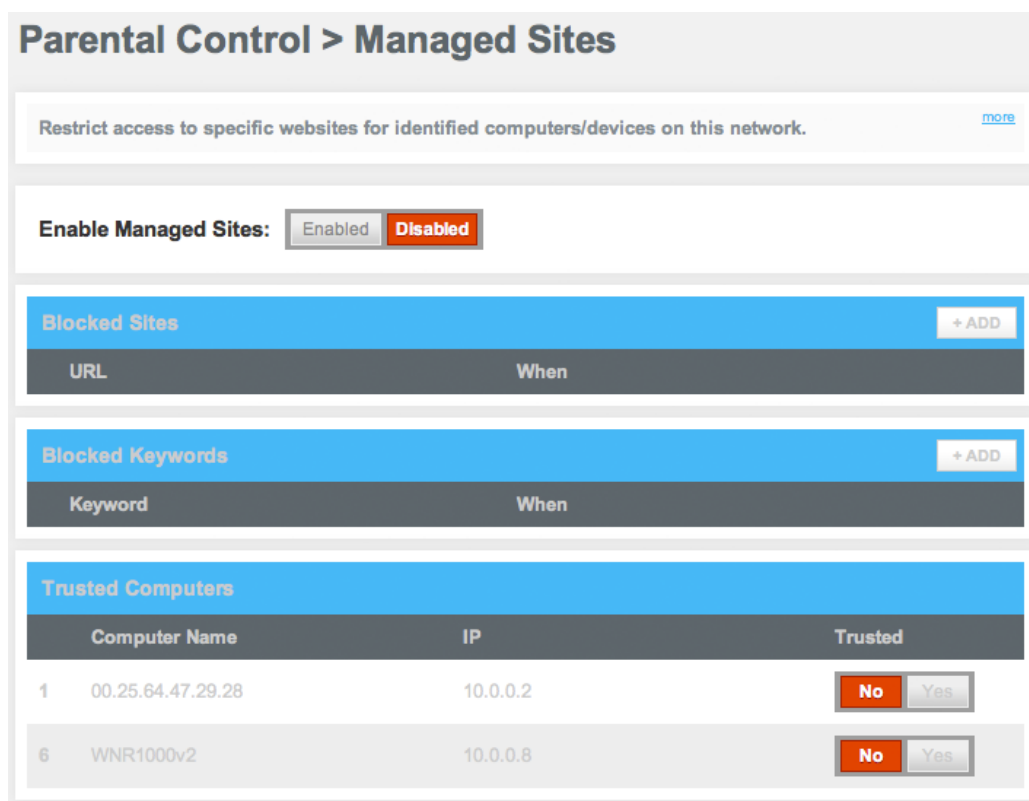

Fig. 1

If the Blocked Sites, Blocked Keywords and Trusted Computers are grayed out, click **Enable** next to *Enable Managed Sites*. You can then add blocked sites or keywords.

## Trusted Computers

Specify the computers you do not want affected. If a computer is selected as a Trusted Computer, it bypasses the configured parental control settings. Under Trusted select **Yes** to make a device a Trusted Computer and **No** if a device is not a Trusted Computer.

## Blocked Sites

Enter the URLs of the website(s) to be blocked and set up a time schedule

Access from the left navigation menu:

*Parental Control > Managed Sites > Click **ADD** next to Blocked Sites*

**Parental Control > Managed Sites > Add Blocked Domain**

**Add Site to be Blocked**

URL:

Always Block?

**Set Block Time**

Start from:

End on:

**Set Blocked Days**

[Select All](#) | [Select None](#)

- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday
- Sunday

Fig. 1

Please enter the URL in [www.xfinity.com](http://www.xfinity.com) format. The blocked website may be accessible using its IP address.

## Blocked Keywords

Enter keyword(s) that appear on websites you want blocked and set up a time schedule

Access from the left navigation menu:

*Parental Control > Managed Sites > Click **ADD** next to Blocked Keywords*

**Parental Control > Managed Sites > Add Blocked Keyword**

**Add Keyword to be Blocked**

Keyword:

Always Block?

**Set Block Time**

Start from:

End on:

**Set Blocked Days** [Select All](#) | [Select None](#)

- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday
- Sunday

Fig. 1

## MANAGED SERVICES

Prevent access to applications and services

Access from the left navigation menu:

*Parental Control > Managed Services*

### Parental Control > Managed Services

Prevent access to specific applications and services. [more](#)

**Enable Managed Services:** Enabled Disabled

**Blocked Services**
+ ADD

Services	TCP/UDP	Starting Port	Ending Port	When

**Trusted Computers**

	Computer Name	IP	Trusted
1	unknown	10.0.0.2	<span style="background-color: #FF4500; color: white; padding: 2px 5px; border-radius: 3px;">No</span> <span style="background-color: #ccc; padding: 2px 5px; border-radius: 3px; margin-left: 5px;">Yes</span>

Fig. 1

## Blocked Services

Define services and ports to be blocked using Parental Control

Access from the left navigation menu:

*Parental Control > Managed Sites > Click **ADD** next to Blocked Sites*

### Parental Control > Managed Services > Add Blocked Service

Add Service to be Blocked

User Defined Service:

Protocol:

Start Port:

End Port:

Always Block?  No  Yes

**Set Block Time**

Start from:

End on:

**Set Blocked Days**

[Select All](#) | [Select None](#)

- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday
- Sunday

Fig. 1

## MANAGED DEVICES

Displays information about devices that can be managed by rules

Access from the left navigation menu:

*Parental Control > Managed Devices*

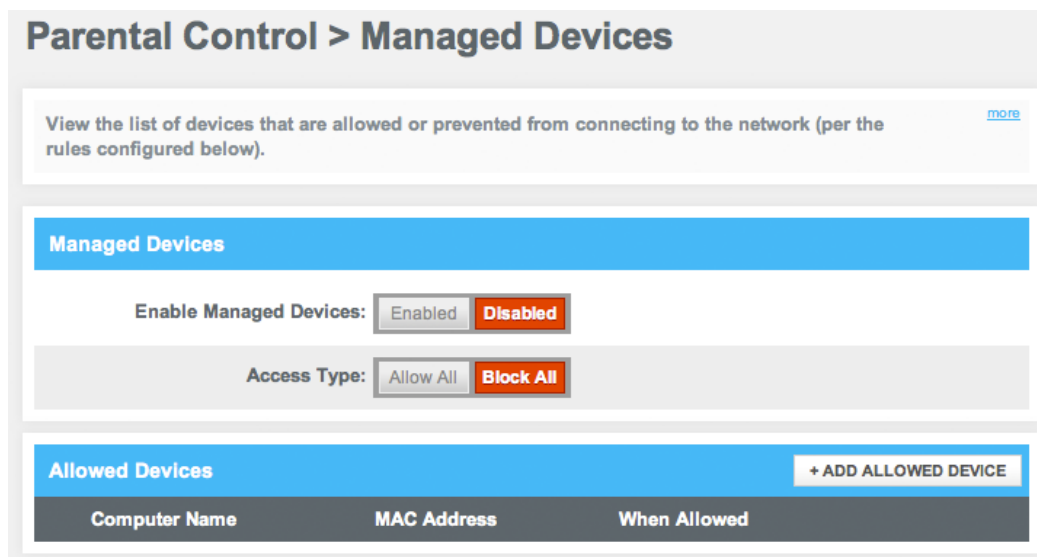

Fig. 1

- When **Block All** is selected, an **+Add Allowed Devices** button will be displayed.
- When **Allow All** is selected, an **+Add Blocked Devices** button will be displayed.

## Add Allowed Devices

Define devices that are exempt from Parental Controls

Access from the left navigation menu:

*Parental Control > Managed Sites > Click **ADD ALLOWED DEVICE***

### Parental Control > Managed Devices > Add Allowed Device

Add Device to be Allowed

**Set Allowed Device**

**Auto-Learned Devices:**

	Computer Name	MAC Address
<input type="radio"/>	unknown	00:26:08:ea:78:cb
<input type="radio"/>	Comcasts-iPad	e8:06:88:8e:44:57
<input type="radio"/>	00.25.64.47.29.28	00:26:bb:48:74:17
<input type="radio"/>	unknown	00:0F:1F:FF:4D:B5
<input type="radio"/>	unknown	00:25:64:47:29:28
<input type="radio"/>	unknown	00:24:B2:56:4E:79

**Custom Device:**

	Computer Name	MAC Address
<input checked="" type="radio"/>	<input style="width: 100%;" type="text"/>	<input style="width: 100%;" type="text"/>

**Always Allow?**

**Set Allow Time**

Start from:

End on:

**Set Allow Days**

[Select All](#) | [Select None](#)

- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday
- Sunday

Fig. 1

## Reports

Create reports that display attempted violations of the Parental Control rules

Access from the left navigation menu:

*Parental Control > Reports*

**Parental Control > Reports**

Generate reports which you can download or print.

**Report Filters**

Fig. 1

# Advanced

## PORT FORWARDING

Allows new incoming connections of a certain type to be directed to a certain computer or server

Access from the left navigation menu:

*Advanced > Port Forwarding*

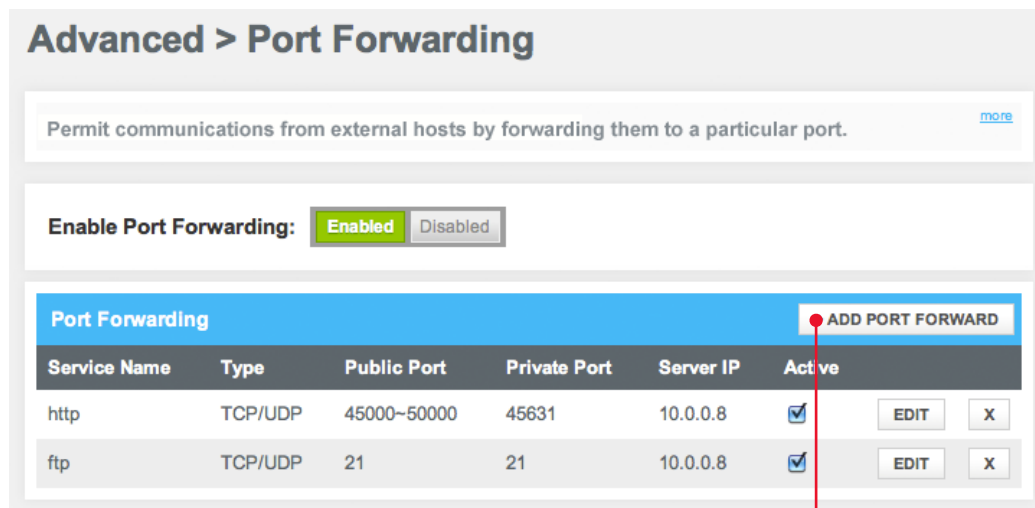

Fig. 1

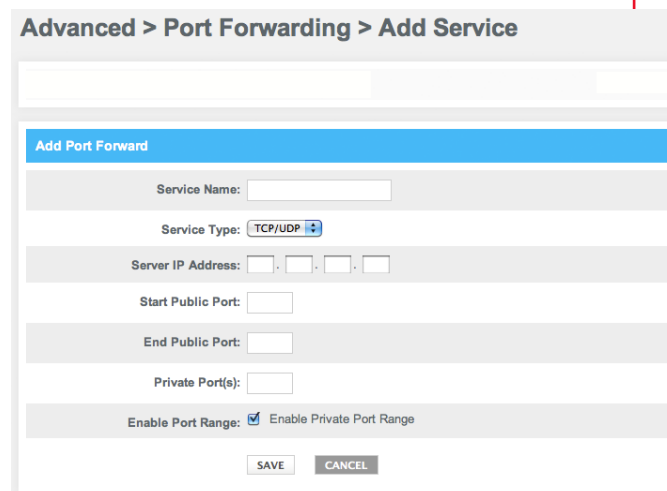

Fig. 2

For example, if a new incoming FTP session arrives at the router, the router needs to know which server is responsible for this traffic. The Port Forwarding rules tell the router which server should get this traffic based on the incoming port number. To use port forwarding, you use static IP addresses for the computers (servers) to which the traffic will be forwarded to.

## PORT TRIGGERING

Temporarily opens an incoming port to a particular computer or server when that computer initiates a particular outgoing connection (the trigger).

Access from the left navigation menu: *Advanced > Port Triggering*

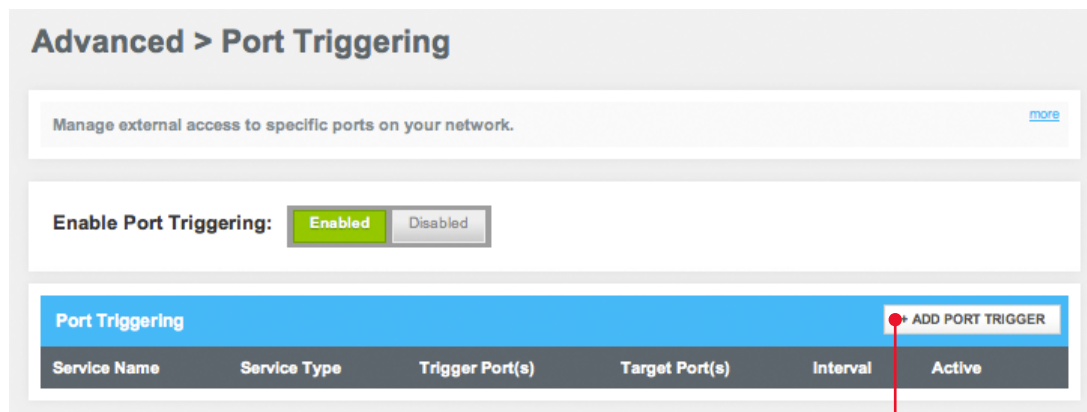

Fig. 1

The **Add Port Trigger** button can be clicked only when Enable Port Triggering is **Enabled**.

Fig. 2

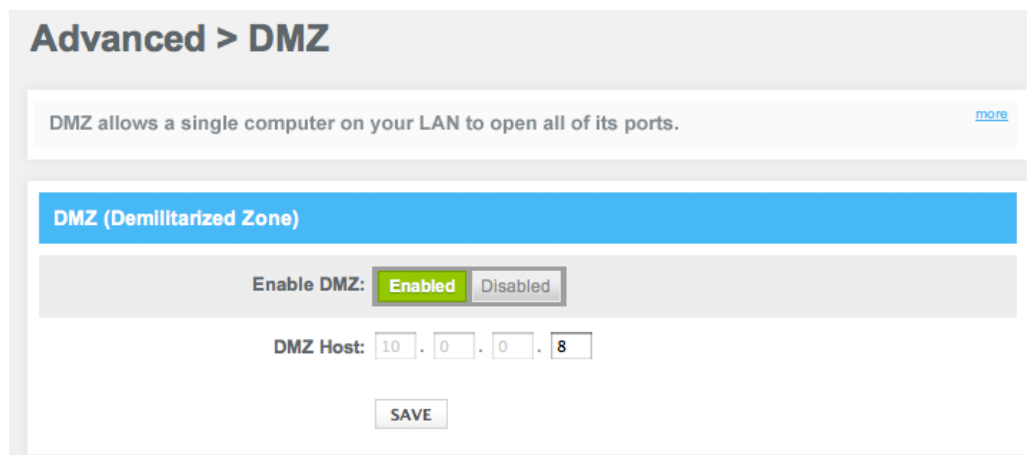

Note: You may not need to configure the interval for port triggering.

## DMZ

Configure a single computer on your LAN to open all of its ports

Access from the left navigation menu:

*Advanced > DMZ*

The screenshot shows a web interface for configuring DMZ. At the top, the breadcrumb "Advanced > DMZ" is displayed. Below it, a text box explains that DMZ allows a single computer on the LAN to open all its ports, with a "more" link. A blue header bar reads "DMZ (Demilitarized Zone)". Underneath, the "Enable DMZ:" section has two radio buttons: "Enabled" (which is selected and highlighted in green) and "Disabled". Below this, the "DMZ Host:" field is set to "10 . 0 . 0 . 8". A "SAVE" button is located at the bottom of the configuration area.

Fig. 1

## DEVICE DISCOVERY

Displays the settings for automatic device discovery

Device Discovery uses Plug and Play (UPnP) to automatically configure the router and devices for various Internet applications, such as gaming, media sharing and video conferencing.

Access from the left navigation menu:

*Advanced > Device Discovery*

The screenshot shows the 'Advanced > Device Discovery' settings page. At the top, there is a header 'Advanced > Device Discovery'. Below the header, a message states 'UPnP enabled Gateway discovers all UPnP enabled client devices.' with a 'more' link. The main settings area is titled 'Device Discovery' and contains the following options:

- Enable UPnP:** A toggle switch set to 'Enabled'.
- Advertisement Period:** A text input field containing '30' followed by the text 'minutes'.
- Time To Live:** A text input field containing '5' followed by the text 'hops'.
- Enable Zero Config:** A toggle switch set to 'Enabled'.

At the bottom of the settings area, there is a 'SAVE' button.

Fig. 1

# Troubleshooting

## LOGS

View the System, Event and Firewall Logs (same as seen under *Parental Control > Reports*). Use these logs to troubleshoot issues and to identify potential security risks

Access from the left navigation menu:

*Troubleshooting > Logs*

**Troubleshooting > Logs**

Use these logs to troubleshoot issues and to identify potential security risks. [more](#)

**Log Filters**

---	------------------------	----------

Fig. 1

## DIAGNOSTIC TOOLS

You can run a Connectivity or IP Check test to troubleshoot connectivity issues to a website URL or IP address.

Access from the left navigation menu:

*Troubleshooting > Diagnostic Tools*

The screenshot displays the 'Troubleshooting > Network Diagnostic Tools' page. At the top, there is a header with the title and a 'more' link. Below the header, there is a section titled 'Test Connectivity Results' with a blue background. This section shows 'Connectivity to the Internet: Active', 'Packets Sent: 4', 'Packets Received: 4', and 'Destination Address: www.comcast.net' with a 'Count: 4'. A 'TEST CONNECTIVITY' button is located below this section. The second section is titled 'Check for IP Address Results' with a blue background. It shows 'IP Address: 10 . 0 . 0 . 1' with a 'Count: 4' and 'Connectivity: OK'. A 'CHECK FOR IP ADDRESSES' button is located below this section.

Fig. 1

- *Test Connectivity Results* tests your Internet connection. Input any valid URL, such as [www.xfinity.com](http://www.xfinity.com), in the **Destination Address** field. If there is no connectivity or the URL is invalid, then the test will fail.
- *Check for IP Address Results* determines if an IP address is accessible.

## RESTORE/RESET GATEWAY

Enables the resetting of your Wireless Gateway and restoring of factory defaults

**CAUTION:** If you select **Restore Factory Settings**, be certain you want to reset ALL settings (passwords, parental controls and firewall settings) before proceeding! You will lose all customized settings you may have made to your Wireless Gateway.

Please also note that a Factory Restore will take your Wireless Gateway out of Bridge Mode if it had been previously enabled. Call 1-800-XFINITY if you would like to enable Bridge Mode again.

Access from the left navigation menu:

*Troubleshooting > Restore/Reset Gateway*

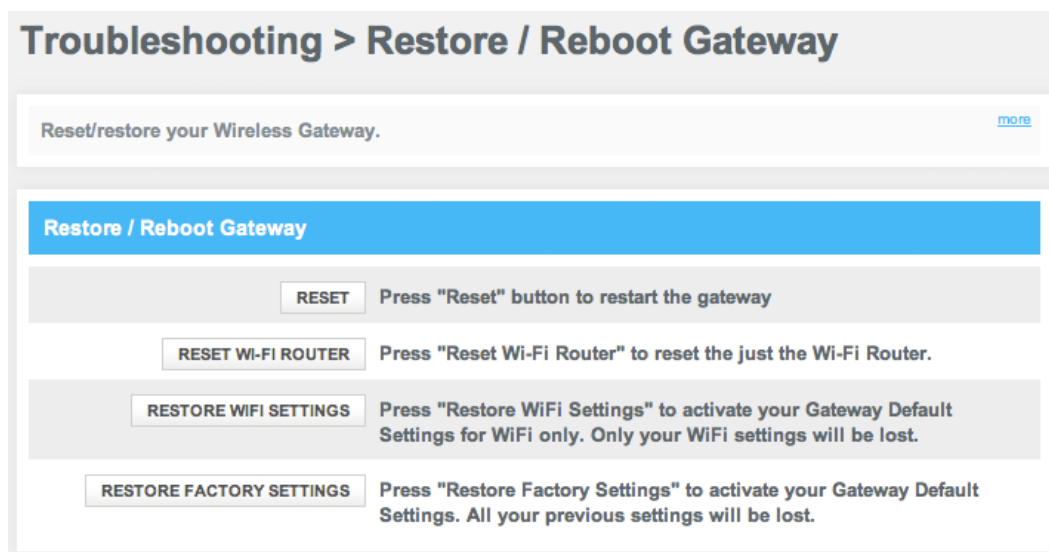

Fig. 1

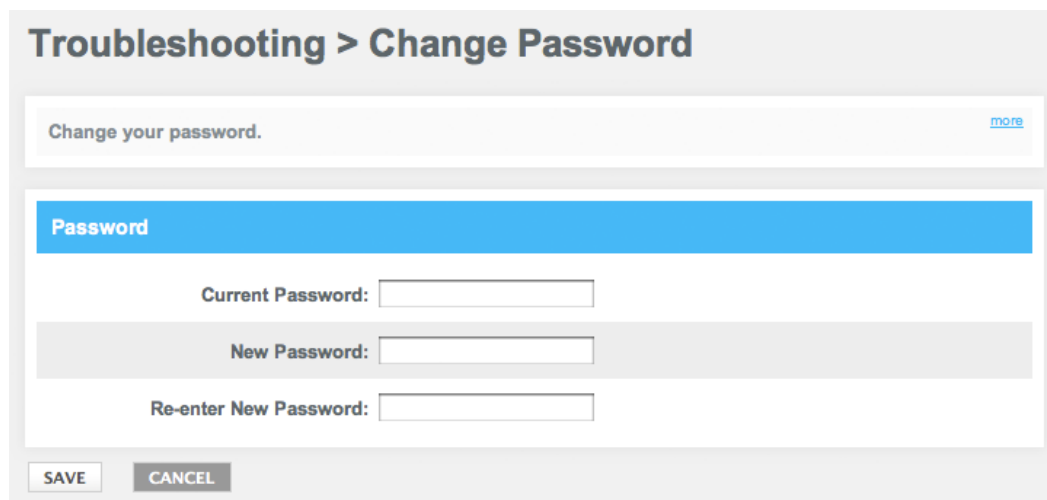

- If you click **Reset** when someone is using the phone, you'll see a warning message that a Voice Call is in Progress and will be disconnected if the Wireless Gateway is rebooted.
- The Wireless Gateway will take a few seconds to reset the Wireless Gateway. Internet connectivity through the Ethernet may be lost momentarily.

## CHANGE PASSWORD

Change the password for your Wireless Gateway

Access from the left navigation menu:

*Troubleshooting > Change Password*

The screenshot shows a web interface for changing a password. At the top, there is a breadcrumb trail: **Troubleshooting > Change Password**. Below this, a white box contains the text "Change your password." with a blue "more" link to its right. Underneath is a blue header bar labeled "Password". The form contains three input fields: "Current Password:", "New Password:", and "Re-enter New Password:". At the bottom of the form are two buttons: "SAVE" and "CANCEL".

Fig. 1

- Enter your current password and a new password.
